

Free virions: NEW model vs two CLASSICAL choices
Solid navy = NEW | Dashed orange = CLASSICAL matched | **Dotted green = CLASSICAL naive (wrong units for p)**

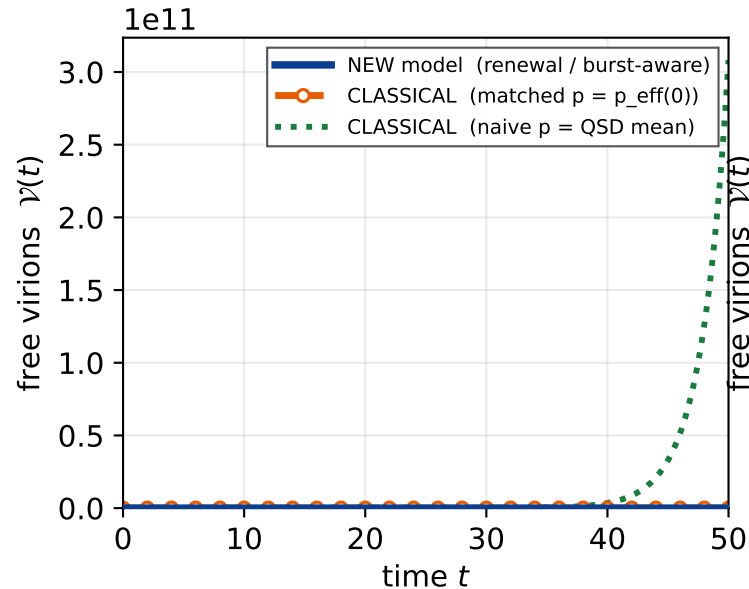

(a) supercritical, $\mu = 0$

$\beta = 1.0, \mu = 0.0, \delta = 0.1 \mid \gamma T = 0.04, c = 0.25 \mid R_0 = 1.76$

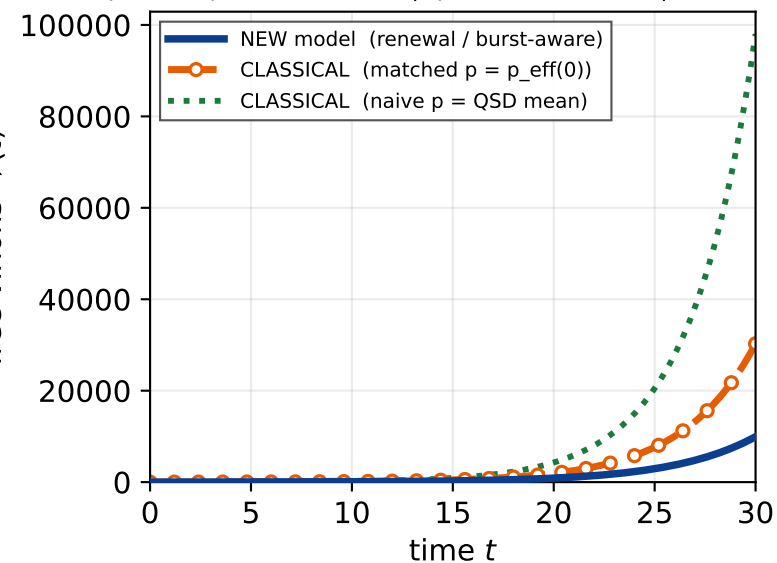

(b) supercritical, $\mu > 0$

$\beta = 1.0, \mu = 0.2, \delta = 0.05 \mid \gamma T = 0.03, c = 0.2 \mid R_0 = 2.10$

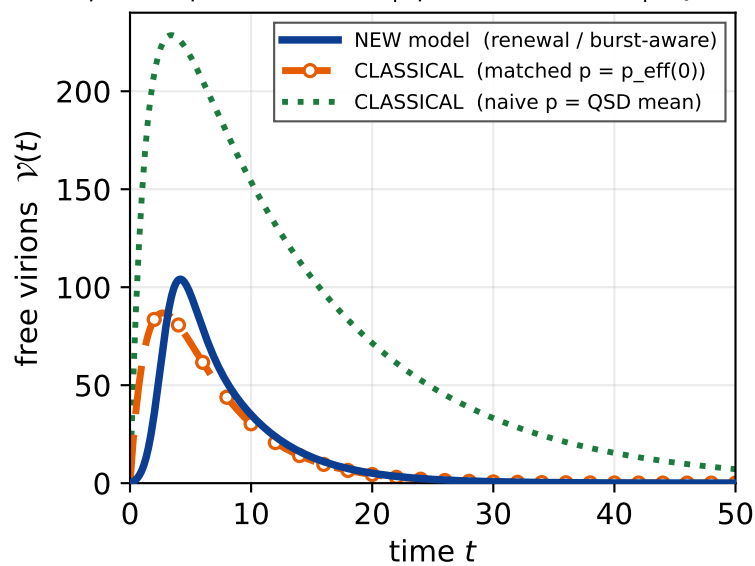

(c) fast burst (large δ)

$\beta = 1.0, \mu = 0.0, \delta = 0.5 \mid \gamma T = 0.25, c = 0.3 \mid R_0 = 2.5$

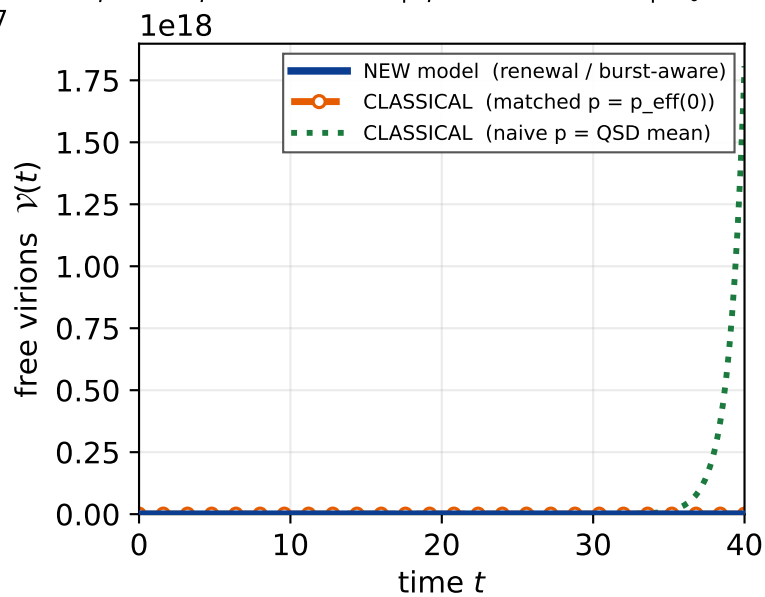

(d) subcritical $R_0 < 1$

$\beta = 1.0, \mu = 0.0, \delta = 0.1 \mid \gamma T = 0.01, c = 0.4 \mid R_0 = 0.27$

(e) high intracellular death

$\beta = 1.0, \mu = 0.9, \delta = 0.1 \mid \gamma T = 0.5, c = 0.25 \mid R_0 = 2.63$

(f) free-virion seed only ($I_0 = 0$)

$\beta = 1.0, \mu = 0.0, \delta = 0.1 \mid \gamma T = 0.05, c = 0.2 \mid R_0 = 2.7$
