

Conditioning changes which burst-size mean is being taken

$(\lambda, \mu, \delta) = (1, 0.2, 0.05)$

condition on very late bursts

remove no-burst mass $b = 0.188$

mean released particles

13.99

17.23

33.46

All cells
 V_∞

Cells that burst
 $V_\infty/(1-b)$

Very late bursts
 $(a+1)/(a-1)$
